

## Can the ramps be installed over tree roots?

---

At Easy Care Systems, installing Rapid Ramps over tree roots can be challenging, as roots may create an uneven surface and affect the stability of the ramp. However, it is possible to install the ramp over tree roots with careful planning. In such cases, additional support or leveling techniques, such as using a base or ground preparation to smooth the surface, may be required. Our team will assess the site and determine the best approach to ensure a safe and stable installation.
