

Is a bidet more sanitary than wiping?

Yes, a bidet is generally considered more sanitary than wiping with toilet paper. Bidets use a stream of water to cleanse the area, which can more effectively remove bacteria and residue compared to wiping, which may leave behind traces of waste. Water is a natural and gentle way to clean, providing a more thorough and hygienic experience. In addition, bidets can reduce the risk of irritation or infection that might result from harsh wiping with toilet paper. At EasyCare Systems, we offer bidet products that promote superior cleanliness and comfort.
