

What is a Commode Chair?

A commode chair is a portable toilet chair designed for individuals with limited mobility. It features a toilet seat with a removable waste container, providing a convenient solution for those who have difficulty accessing a traditional bathroom.

Types of commode chairs:

- **Static commode chairs** – Stationary models designed for bedside use.
- **Wheeled commode chairs** – Equipped with wheels for easy movement, often used as a transfer chair.
- **Shower commode chairs** – Made from waterproof materials for safe use in the shower.

Some models can also be placed over a standard toilet to provide additional support. Commonly used in hospitals, care homes, and home care settings, commode chairs enhance comfort, accessibility, and independence for users.
