

## Why are some toilet seats horseshoe-shaped?

---

Horseshoe-shaped toilet seats are commonly found in public restrooms and healthcare settings for several practical reasons:

1. **Improved Hygiene** – The open front reduces contact points, making cleaning easier and helping to prevent the buildup of germs.
2. **Accessibility** – The design provides extra space at the front, making it easier for users to clean themselves and accommodating individuals with mobility challenges.
3. **Ease of Use for Caregivers** – In healthcare environments, such as those served by *EasyCare Systems*, horseshoe-shaped seats allow caregivers to assist patients more easily.
4. **Better Ergonomics** – The open front can improve comfort for some users, especially in bariatric or specialized medical settings.

If you're considering a horseshoe-shaped toilet seat for accessibility or hygiene reasons, *EasyCare Systems* may offer solutions suited to your needs.
